

## DISMANTLING INSTRUCTIONS

*If you wish to dismantle the SunnyTent, please follow the steps of the installation instructions in reverse order. Please refer to the installation instructions.*

### IN SHORT:

**Step 1:** Remove tent pegs from the tent.

**Step 2:** Lower the tent.

**Step 3:** Remove the tent poles from the anchors.

**Step 4:** Place the tent in such a way that the tent poles are straight and remove the poles from the tent by sliding them out of the tent tunnels.

**Attention:** never pull on the poles (or parts thereof), as you might break the elastic cord inside the poles. **Push** the poles out rather than pulling them from the tunnels. How? *With one hand you push the pole set forward (into the tent tunnel) while with the second hand you obstruct the blue / grey tent tunnel. Thereafter you clamp the tunnel with 'hand 2' while you pull back the empty blue / grey tent tunnel with 'hand 1'. Repeat this action until the pole set is completely free from the tunnel.*

**Step 5:** Clean the SunnyTent and allow it to dry fully before folding and storing the tent. Thoroughly clean and dry the poles, anchors and tent pegs.

**CAUTION:** Always ensure that your SunnyTent is stored in a frost-free and dry place where the temperature never rises above 30°C. If you place the SunnyTent near a heating pipe or any heat source, there is a chance that the material of the pole tunnels may shrink.
